

Characteristics

The direct operated directional valves series D1VW with inductive position control are typically used in safety relevant applications. The start or end position can be monitored. The position control is available for single and double solenoid valves.

The fail-safe position of the directional valve during power failure is the spring offset or center position.

Please find detailed information on the machine directive in the position paper in chapter 1.

Attention:

The adjustment of the position control is factory set and sealed. Replacement and repairs can only be undertaken by the manufacturer.

Definitions

Start position monitored:

The valve is de-energized. The inductive switch gives a signal at the moment when the spool leaves the spring offset position (below 15 % spool stroke).

At the switching point the spool is located within the closed position. It is secured that only the flow paths of the offset position are granted.

End position monitored:

The inductive switch gives a signal before the end position is reached (above 85 % spool stroke).

The switch can only be located on the opposite side of the solenoid for direct operated valves. Please order plug M12x1 separately (see accessories, plug M12x1; order no.: 5004109).

¹⁾ Only guaranteed with screened cable and female connector

Flow curve diagram

All characteristic curves measured with HLP46 at 50 °C.

Shift limit diagram

The diagram below specifies the shift limits. Valves with spool position “F” or “M” can only be operated up to 70 % of the limits. The specifications apply to a viscosity of 40 mm²/s and balanced flow conditions. The shift limits can

be considerably lower at unbalanced flow conditions. To avoid flow rates beyond the shift limits, a plug-in orifice can be inserted in the P-port.

All characteristic curves measured with HLP46 at 50 °C, 90 % U_{nom} and warm solenoids.

Technical drawing of the 600 series solenoid valve. The side view shows overall dimensions: total height 86.5 mm, mounting bracket height 58.5 mm, coil diameter Ø9.5 mm, and body diameters Ø5.5 mm at points A and B. Horizontal dimensions include 132.5 mm from the left flange to point A, and 308 mm total length. The front view shows a circular face with a diameter of 46 mm.

The space necessary to remove the plug per EN 175301-803, design type AF is at least 15 mm.
The torque for the screw M3 of the plug has to be 0.5 to 0.6 Nm.
The space necessary to remove the M12x1 female connector is at least 22 mm.

The adjustment of the position control is factory set and sealed. Replacement and repairs can only be undertaken by the manufacturer.

²⁾ Please order plug M12x1 separately. Straight plug recommended – no defined position possible for angled plug.
